Important notices

- The PA Helpdesk has been launched as a pilot project with the intention of further improving the support provided by the Programme Administrators to students and teaching staff. **Open Monday to Friday, 13h00 to 17h00 the PA Helpdesk is located in the Library next to the ILIAD Helpdesk. (Tel. ext: 700)** For staff and students' questions relating to the Teaching Programme e.g. Calendar, VLE, Research Paper - we have the answers!

- Should you have any problems with Moodle please email iliad@iss.nl

- Course Outlines for Terms 1,2 and 3 (with no linked readings) can be found in MA 2008-2009

Constructivism

From a constructivist point of view, people actively **construct** new knowledge as they interact with their environments.
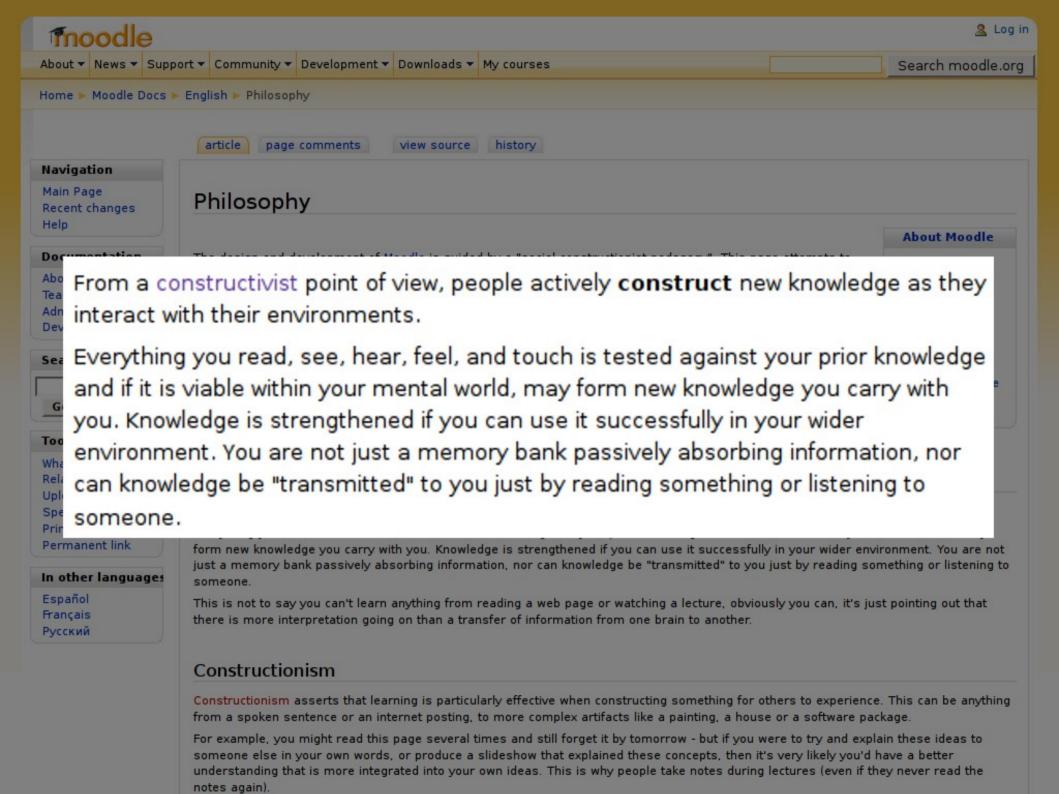

Everything you read, see, hear, feel, and touch is tested against your prior knowledge and if it is viable within your mental world, may form new knowledge you carry with you. Knowledge is strengthened if you can use it successfully in your wider environment. You are not just a memory bank passively absorbing information, nor can knowledge be "transmitted" to you just by reading something or listening to someone.
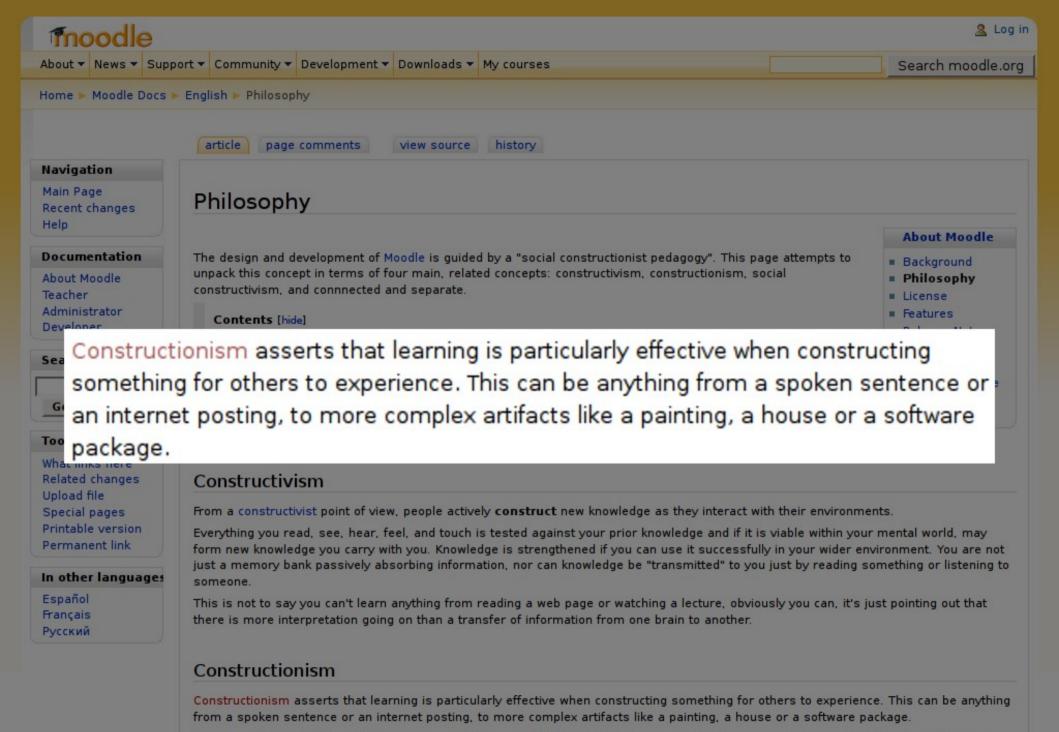

This is not to say you can't learn anything from reading a web page or watching a lecture, obviously you can, it's just pointing out that there is more interpretation going on than a transfer of information from one brain to another.

Constructionism

Constructionism asserts that learning is particularly effective when constructing something for others to experience. This can be anything from a spoken sentence or an internet posting, to more complex artifacts like a painting, a house or a software package.

For example, you might read this page several times and still forget it by tomorrow - but if you were to try and explain these ideas to someone else in your own words, or produce a slideshow that explained these concepts, then it's very likely you'd have a better understanding that is more integrated into your own ideas. This is why people take notes during lectures (even if they never read the notes again).

Philosophy

The design and development of Moodle is guided by a "social constructionist pedagogy". This page attempts to unpack this concept in terms of four main, related concepts: constructivism, constructionism, social constructivism, and connnected and separate.

About Moodle

- Background
- **Philosophy**
- License

Social constructivism extends constructivism into social settings, wherein groups construct knowledge for one another, collaboratively creating a small culture of shared artifacts with shared meanings. When one is immersed within a culture like this, one is learning all the time about how to be a part of that culture, on many levels.

Constructivism

From a constructivist point of view, people actively **construct** new knowledge as they interact with their environments.

Everything you read, see, hear, feel, and touch is tested against your prior knowledge and if it is viable within your mental world, may form new knowledge you carry with you. Forums, forums, forums
& the humane interface

Yochai Benkler: „*Technology creates feasibility spaces for social practice. Some things become easier and cheaper, others become harder and more expensive to do or prevent under different technological conditions.*“

Course Facilitator:

This is by far the best online discussion we've had, in terms of participants responding to eachother. I think the most likely explanation is the overall appearance of the Moodle system (the Teletop facility wasn't that different, but somehow it didn't seem to encourage responses).

GNU General Public License
Version 2

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Preamble

  The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software--to make sure the software is free for all its users. This
General Public License applies to most of the Free Software
Foundation's software and to any other program whose authors commit to
using it. (Some other Free Software Foundation software is covered by
the GNU Lesser General Public License instead.) You can apply it to
your programs, too.

  When we speak of free software, we are referring to freedom, not
price. Our General Public Licenses are designed to make sure that you
have the freedom to distribute copies of free software (and charge for
this service if you wish), that you receive source code or can get it
if you want it, that you can change the software or use pieces of it
in new free programs; and that you know you can do these things.

  To protect your rights, we need to make restrictions that forbid
anyone to deny you these rights or to ask you to surrender the rights.
These restrictions translate to certain responsibilities for you if you
distribute copies of the software, or if you modify it.

Free software is a matter of the users' freedom to run, copy, distribute, study, change and improve the software. More precisely, it refers to four kinds of freedom, for the users of the software:

- The freedom to run the program, for any purpose (freedom 0).

- The freedom to study how the program works, and adapt it to your needs (freedom 1). Access to the source code is a precondition for this.

- The freedom to redistribute copies so you can help your neighbor (freedom 2).

- The freedom to improve the program, and release your improvements (and modified versions in general) to the public, so that the whole community benefits (freedom 3). Access to the source code is a precondition for this.

Our Philosophy

Our work is driven by a philosophy on software freedom that aims to spread and bring the benefits of software to all parts of the world. At the core of the Ubuntu Philosophy are these core philosophical ideals:

1. Every computer user should have the freedom to download, run, copy, distribute, study, share, change and improve their software for any purpose, without paying licensing fees.

2. Every computer user should be able to use their software in the language of their choice.

3. Every computer user should be given every opportunity to use software, even if they work under a disability.

Our philosophy is reflected in the software we produce and included in our distribution. As a result, the licensing terms of the software we distribute are measured against our philosophy, using the Ubuntu License Policy.

When you install Ubuntu almost all of the software installed already meets these ideals, and we are working to ensure that every single piece of software you need is available under a license that gives you those freedoms.

Currently, we make a specific exception for some "drivers" which are only available in binary form, without which many computers will not complete the Ubuntu installation. We place these in a restricted section of your system which makes them easy to remove if you do not need them.

More about components>>

Free software

For Ubuntu, the 'free' in 'free software' is used primarily in reference to freedom, and not to price - although we are committed to not charging for Ubuntu. The most important thing about Ubuntu is that it confers rights of software freedom on the people who install and use it. It is these freedoms that enable the Ubuntu community to grow, continue to share its collective experience and expertise to improve Ubuntu and make it suitable for use in new countries and new industries.

Accessibility is a measure of civilisation

Moodle Accessibility Specification
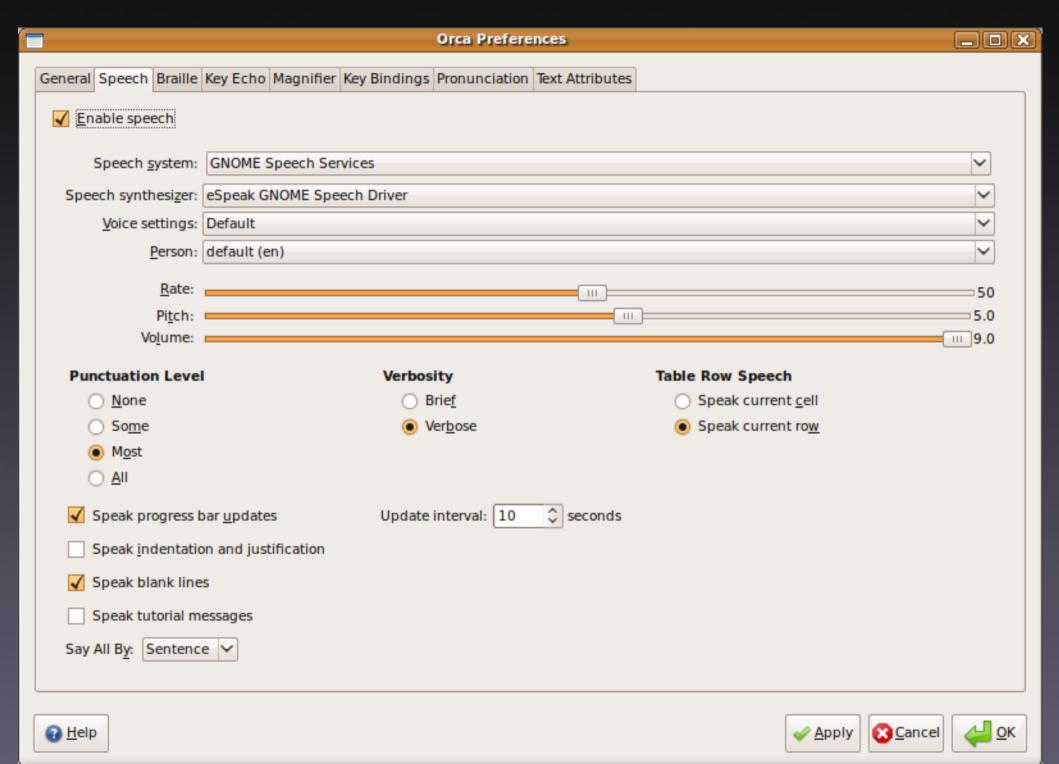

Introduction

This accessibility specification has been developed by accessibility experts and Moodle developers at the Open University (OU), UK. The OU has adopted Moodle as a core component of its VLE and is contributing to the continued Open Source (OS) development of Moodle. Accessibility is an important for the OU because: it currently has over 9,300 disabled students; it has long standing aspirations to promote widening participation in higher education; and because of its legal obligations. Further it is important for the whole Moodle community as further discussed under "Rationale" below.

Accessibility is a term that has particular meanings in different contexts; here it refers to design qualities that endeavour to make online learning available to all by ensuring that the way it is implemented does not create unnecessary barriers however the student may interact with their computer. Virtually anyone, irrespective of any disability, can be enabled to interact effectively with a computer. Some people with disabilities interact with the computer using methods other than the conventional monitor, keyboard and mouse, some require special tools, usually referred to as "assistive technology", and some need the way content is presented to them by the computer to be appropriate to their needs (for example in terms of font sizes and/or colour contrast).

There are well established design principles for accessibility in software design and electronic content. These promote compatibility with assistive technology and ensure that different ways of interacting with the computer can be accommodated. This specification highlights further development work required in Moodle if these principles are to be considered effectively implemented across its various tools and modules.

How do people who cannot see „view" a web page?

Malaria, perfect skin & proprietary software – a story about languages

Moodle UTF-8 language packs

There are currently a total of 78 language packs.

These zip files are generated daily from the latest files checked into Moodle's CVS archive, and may be incomplete translations. The date beside each one shows when they were last updated.

For further information, please refer to the **Translation documentation**. Contact details for language pack maintainers are listed in the **Translation credits**.

Installation for Moodle 1.6 onwards:

In Moodle 1.6 and later you usually never need to use this manual page. In your Moodle admin menu under "Languages" you will find a utility that allows you to select, download and install these language packs directly from within Moodle.

If this doesn't work, you can install these languages manually into any recent version of Moodle by downloading the zip file below to a directory called *lang* in your *moodledata* directory and unzipping it there.

Installation for Moodle 1.5 and earlier:

Don't use the language packs on this page unless you really know what you're doing!. Older language packs are available for download on the **Pre-Moodle 1.6 language packs** page.

Course outline/syllabus

Socialist Models, Dependency Theory and New Dependency

The objective of this session is to explain the central elements of the dependency and world-system approaches, which were developed in the 1960s and 1970s in response to the Western-dominated theory of development, and challenged the idea of unilinear development. The contemporary relevance of the concept of dependence will be assessed by focusing on the analysis of the 'new dependency'.

Required readings:

Manuel Castells and Roberto Laserna, 'The New Dependency: Technological Change and Socioeconomic Restructuring in Latin America ', in: A. Douglas Kincaid and Alejandro Portes (eds.), *Comparative National Development: Society and Economy in the New Global Order* (Chapel Hill: University of North Carolina Press, 1994), pp. 57-82.

Tom Hewitt, 'Half a century of development' in: Tim Allen and Alan Thomas (eds.), *Poverty and Development into the 21st Century* **Link to ISS Library Catalogue**

Andrew Kilmister, 'Socialist models of Development' in: Tim Allen and Alan Thomas (eds.), *Poverty and Development into the 21st Century* Oxford University Press/The Open University, 2000), pp. 309-324 **Link to ISS Library Catalogue**

Recommended readings:

Andre Gunder Frank, *placeLatin America : Underdevelopment or Revolution. Essays on the Development of Underdevelopment and the Immediate Enemy* (New York: Monthly Review Press, 1969), pp. 3-17 (Chapter 1: 'The Development of Under-development').

Fernando Henrique Cardoso and Enzo Faletto, *Dependency and Development in placeLatin America* (Berkeley: University of California Press, 1979).

James M. Cypher and James L. Dietz, *The Process of Economic Development*, 2nd. ed. London: Routledge, 2004), pp. 158-171 and 177-185 (Chapter 6: 'Heterodox Theories of Economic Development').

D.Harvey (2003) *The New Imperialism*, Oxford: Clarendon, excerpted at pp.183-199, in Sharad Chari and Stuart Corbridge (2008). *The Development* Reader, London : Routledge .

Immanuel Wallerstein, *The Modern World-System* (New York: Academic Press, 1974).

Capturing as you go along

10 Capturing what passes by

I will use this topic to link to any web pages that have been mentioned or demo-ed during the course. This way you do not have to be scared to lose any information: you should always be able to find it back.

# First steps on the pedagogical ladder

1. Put up the handouts (Resource, SCORM)
2. Have a passive Forum
3. Use Quizzes/Assignments (less management)
4. Use Wiki, Glossary, Database (better content)
5. Use the Forum seriously and actively
6. **Combine the activities into sequences**
7. Think deeper about learning activities
8. Use the Survey module to study / reflect
9. Use peer-review modules like Workshop
10. Sharing ideas, active research, self-study

Death to forums for „general use"

they should be called „forums for general non-use"

Website | Library | eZnet | Moodle

This forum allows everyone to choose whether to subscribe or not

Everyone can now choose to be subscribed

Unsubscribe from this forum

This is a social forum where you can discuss any topic you like. All students and staff can read the postings and all may post a new item or discuss an existing one. You receive each posting by e-mail as well. You can "unsubscribe" yourself from the e-mail notification service for this forum if you like.

Add a new discussion topic

(There are no discussion topics yet in this forum)

Forums are the most powerful functionality from a pedagogical perspective

They require design

We will use this forum to get to know each other. Please do the following:

1. Think of a question you would like to ask all your fellow participants. It can be a personal or a professional question.
2. Click on the "Add a new discussion topic" button below and type your question in the "Subject" field. If your question needs any further explanation, you can do this in the "Message" field. If it doesn't, just repeat the question in the "Message" field.
3. Once you have asked your question, you can spend some time answering other people's questions. You should answer each and every question that is out there.
4. Spend some time reading the answers of other people.

What do you need to know about me so that you have confidence in this course?

Please think of at least one question that you would like to ask me, so that you can be sure that this course is worthwile. Add it as a discussion topic.

Once everybody is done, I will answer the questions.

Don't forget:
It can be a classroom
teaching tool
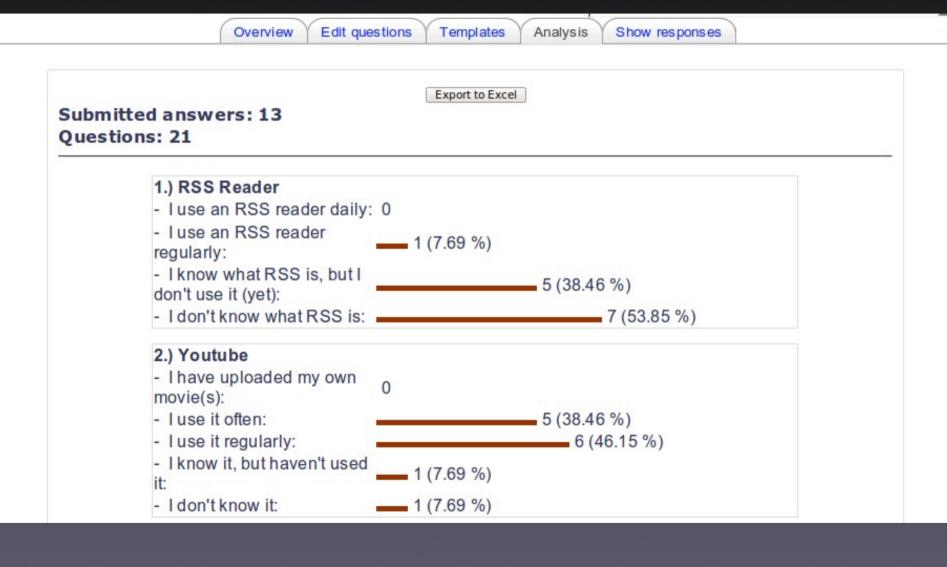

Forums can enlarge the classroom, by pulling the outside in

Get an expert (don't forget her profile picture) and let her participate in the online discussion: independent of time and place.

Quick way to get to know your students

How web 2.0 are you?

This is a short questionnaire trying to find out how web 2.0 you are? Don't worry there are now correct or wrong answers. It is just meant to get a better picture of who is in the room...

Export to Excel

Submitted answers: 13
Questions: 21

1.) RSS Reader
- I use an RSS reader daily: 0
- I use an RSS reader regularly: 1 (7.69 %)
- I know what RSS is, but I don't use it (yet): 5 (38.46 %)
- I don't know what RSS is: 7 (53.85 %)

2.) Youtube
- I have uploaded my own movie(s): 0
- I use it often: 5 (38.46 %)
- I use it regularly: 6 (46.15 %)
- I know it, but haven't used it: 1 (7.69 %)
- I don't know it: 1 (7.69 %)

INTERWRITE® Cricket
Assessment Made Simple

Interwrite Cricket is a powerful yet simple to use clicker for students of all ages. From kindergarten to higher education, Cricket clickers offer robust RF (radio frequency) technology to make real-time student assessment practical for any classroom setting. Students can respond to your questions, while INTERWRITE® Response software captures their responses. Control how you want to display and use the information. Whether used in the smallest of classrooms or in lecture halls with 2,000 students, Cricket is your most cost-effective and affordable student response system solution.

Keeping it simple.

Cricket keeps it simple. From setting it up to uploading your grades, every aspect of Cricket has been designed to simplify assessment for both the instructor and students. You can focus on teaching and not on operating your assessment system.

PowerPoint...and Beyond!

Cricket works with virtually any instructional resource in any format. A PowerPoint plug-in makes PowerPoint an ideal companion for Cricket. If you have existing slides you'd like to "response-enable", no problem. It literally takes just seconds per slide. Cricket is the only system to offer a mode whereby ANY material that you show on your computer can become a Cricket-compatible response question.

Let's talk about assignments

Hands up: who lets students hand in work using email?

Not allowed anymore!

Notice that I am not even talking about handing it in on paper...

A couple of problems:

Who is
lover14_XXX@hotmail.com?

What assignment is being handed in exactly?

You: „*You haven't handed in your assignment*"

They: „*Yes I did, I sent it to your email address!*"

You: „*I didn't get it*"

They: „*I did sent it*"

Who hasn't submitted their assignment?

Keeping track of multiple submissions and grades

The magic of RSS

RSS?

RSS

From Wikipedia, the free encyclopedia
(Redirected from Rss)

RSS (most commonly translated as "Really Simple Syndication") is a family of web feed formats used to publish frequently updated works—such as blog entries, news headlines, audio, and video—in a standardized format.[2] An RSS document (which is called a "feed", "web feed",[3] or "channel") includes full or summarized text, plus metadata such as publishing dates and authorship. Web feeds benefit publishers by letting them syndicate content automatically. They benefit readers who want to subscribe to timely updates from favored websites or to aggregate feeds from many sites into one place. RSS feeds can be read using software called an "RSS reader", "feed reader", or "aggregator", which can be web-based, desktop-based, or mobile-device-based. A standardized XML file format allows the information to be published once and viewed by many different programs. The user subscribes to a feed by entering into the reader the feed's URI – often referred to informally as a "URL" (uniform resource locator), although technically the two terms are not exactly synonymous – or by clicking an RSS icon in a browser that initiates the subscription process. The RSS reader checks the user's subscribed feeds regularly for new work, downloads any updates that it finds, and provides a user interface to monitor and read the feeds.

RSS formats are specified using XML, a generic specification for the creation of data formats. Although RSS formats have evolved since March 1999,[4] the RSS icon ("⬛") first gained widespread use between 2005 and 2006.[5]

☆ **Bush cronies land jobs charging for advice on not getting eaten by the monsters they created**》   8:28 AM (1 hour ago)

by Cory Doctorow

From USA Today: "More than one in four members of President George W. Bush's Cabinet have landed jobs with consulting or lobbying firms in which they can help clients navigate the departments they once oversaw." Michael "DHS" Chertoff is now charging for advice on how not to get screwed by the DHS (the former director of the CIA is working for him); Ashcroft is working for companies that his own DoJ brought anti-trust charges against. Nice work if you can get it.

Several Bush officials work in areas related to former jobs

Name your community:
My Awesome Blog Community

Enter the URL you'd like:

awesomeblogs   .blogs.mu

GET STARTED FOR FREE

Start your own blog network or community for free!

Run your very own Blogger.com / WordPress.com style site

SO, WHAT IS BLOGS.MU?

Blogs.mu is a site that allows you to setup your own WordPress based blog community or network - with the minimum of fuss. Set up blogs yourself or let users come to you.

WHY MIGHT YOU USE US?

You can use Blogs.mu to provide blogs for people in your area, start a local news site or manage your own publishing empire... the possibilities are endless!

HOW DOES BLOGS.MU WORK?

You get your own blog hosting site at you.blogs.mu and then can set up blogs (or let your users set up blogs) at subdirectories like you.blogs.mu/blog1/, you.blogs.mu/blog2/ etc.

ISS is doing a good job...

But you should push for more!

1. Every student a laptop (a requirement like a book)

2. Wifi throughout the building

(and don't forget the power outlets!)
